Art Unit: 3641

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

 Claims 1-15 and 18-24, drawn to an explosive cartridge, classified in class 102, subclass 331.

II. Claims 16 and 17, drawn to a method of charging an explosives borehole with an elongate cartridge, classified in class 102, subclass 317.

The inventions are distinct, each from the other because of the following reasons:

- 2. Inventions I and II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the explosive cartridge of independent claim 1 could be used in an above ground application such as demolition, such an application not involving insertion of the case into a borehole.
- 3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
- 4. This application contains claims directed to the following patentably distinct species of the claimed invention:

If the applicant elects Invention 1 above (the apparatus invention), then the applicant must first choose between the following alternate piercing member species:

<u>Piercing member species 1A</u>, wherein the socket and spigot members each comprise a piercing member comprising at least one axially extending blade (claim 6).

Or

<u>Piercing member species 1B</u>, wherein the socket and spigot members each include a piercing member comprising a pair of diametrically opposed blades (claim 7).

Or

<u>Piercing member species 1C</u>, wherein the socket and spigot members each comprise a piercing member comprising a sharpened edge to cut the sealing member of an adjacent cartridge (claim 8).

Or

<u>Piercing member species 1D</u>, wherein the socket and spigot members each comprise a piercing member adapted to tear the membrane during coupling of respective socket and spigot members (claim 9).

Next, the applicant must choose between the following alternate <u>coupling</u> member species.

<u>Coupling member species 1E</u>, wherein the coupling members are secured to the tubular body by fusion or by an adhesive composition (claim 10).

Or

<u>Coupling member species 1F</u>, wherein the coupling members are secured to the tubular body by mechanical engagement therewith (claims 11 and 12).

Next, the applicant must choose between the following alternate <u>mounting collar</u> <u>species</u>:

Mounting collar species 1G, wherein the mounting collar comprises a retaining band of adjustable length to accommodate tubular explosive cartridges of varying diameters. (claim 19).

Or

Mounting collar species 1H, wherein the mounting collar comprises a circular member adapted for frictional engagement on an outer surface of the explosive cartridge (claim 20).

Or

Mounting collar species 1i, wherein the mounting collar comprises a circular member slidably securable over the outer surface of the explosive cartridge, the collar being anchored to the cartridge by engagement of the detonator extending into the interior region of the cartridge (claim 21).

Conversely, if the applicant elects invention II above (the method invention), then the following election of species must be made:

Method Species 2A: comprising coupling the cartridges together before insertion of the charge into the borehole as a unitary member (claim 16).

Or

Art Unit: 3641

Method Species 2B: comprising sequentially coupling the cartridges together during the insertion of the charge into the borehole (claim 17).

5. Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claim 1 is generic to the above listed alternate species of invention 1.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

- 6. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
- 7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to James S. Bergin whose telephone number is 571-272-6872. The examiner can normally be reached on Monday Wednesday and Friday, 8.30 5.30.

Application/Control Number: 10/769,033 Page 6

Art Unit: 3641

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Michael Carone can be reached on 571-272-6873. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
